

EXTENDED-LEG FITTING COVERS

IDEAL FOR USE WITH
PRE-INSULATED PIPE SYSTEMS

LABOR-SAVING INNOVATION

USDA AUTHORIZED

DESCRIPTION

PROTO'S EXTENDED-LEG FITTING COVERS are the ideal, low-cost solution for use on pre-insulated piping systems, as well as jobs that require additional length from the elbow ends. The extended leg gives the installer the ability to connect the elbow to the pre-insulated pipe section without the use of a "jumper" or metal bands, saving time and money in the field.

PROTO'S EXTENDED-LEG FITTING COVERS are approximately 10" longer overall than the standard "H" Series (two-piece) fitting covers and are fused together along the outer edge using ultrasonic welding technology. This innovation makes installation quick and easy and generates labor savings across the board.

Please contact the factory for current pricing information, as well as available sizes.

ADVANTAGES

- Can be installed onto pre-insulated pipe systems without the use of a "jumper" or metal bands
- Can be sealed to create a vapor retarder
- High gloss finish
- Excellent weathering capabilities
- Tremendous labor savings over traditional installation methods
